

DFP40203 PYTHON PROGRAMMING
EXERCISE: OPERATOR

Name: MUHAMMAD REDZUAN BIN PARSIKUN

Matric Number: 03DDT21F1005

Instruction: Write the output.

#arithmetic operator

`a=12+5*7`

`print(a)`

Output:_____47_____

`b=215 - 16/4`

`print(b)`

Output:_____211.0_____

`c=12 * 8 / 12`

`print(c)`

Output:_____8.0_____

`d=85/6 - 3`

`print(d)`

Output:_____11.166666666666666_____

```
e=round(79/6, 3) #3 titik perpuluhan
```

```
print(e)
```

Output: _____ 13.167 _____

```
f= 1 + 17%4
```

```
print(f)
```

Output: _____ 2 _____

```
g=1 + 17//4
```

```
print(g)
```

Output: _____ 5 _____

```
h= 9**2
```

```
print(h)
```

Output: _____ 81 _____

```
X = 1 + 7 **2 +1
```

print(x) = if x switch with X the answer that display in output is 51

Output: _____ X is not defined _____

```
y =2 ** 3 ** 2
```

```
print(y)
```

Output: _____ 512 _____

#Comparison operators

k = 14==4

print(k)

Output:_____False_____

l= 15!=5

print(l)

Output:_____True_____

m= 5!=5

print(m)

Output:_____False_____

n= 14>5

print(n)

Output:_____True_____

o= 41<5

print(o)

Output:_____False_____

p= 12>=5

print(p)

Output:_____True_____

q= 12<=51

print(q)

Output:_____True_____

#Logical operators

x = False; y = True

r = x and y

print(r)

Output:_____False_____

s = x or y

print(s)

Output:_____True_____

x = False; y = False

t = x and y

print(t)

Output:_____False_____

u = x or y

print(u)

Output:_____False_____

```
x = True; y = True
```

```
v = x and y
```

```
print(v)
```

```
Output:_____True_____
```

```
w = x or y
```

```
print(w)
```

```
Output:_____True_____
```

```
x = False
```

```
z1 = not x
```

```
print(z1)
```

```
Output:_____True_____
```

```
x = True
```

```
z2 = not x
```

```
print(z2)
```

```
Output:_____False_____
```
